

LENARD ANGELO A. OLAJAY

Kalibo, Aklan, Philippines | 09944891004 | olajaylenardangelo@gmail.com | LinkedIn: <https://www.linkedin.com/in/lenard-angelo-olajay-35b083366/> | GitHub: <https://github.com/len-build-it>

Second-year BS Information Technology student majoring in Software Engineering who uses technology and generative AI to turn real-world problems into practical software. Builds and leads full-stack projects across backend systems, data workflows, offline-first applications, and community safety. Hands-on with Python, FastAPI, PostgreSQL, JavaScript, Flutter, Git, Docker, and AI-assisted development. Known for breaking ambiguous problems into workable steps, validating solutions, and taking ideas from concept to prototype.

EDUCATION

Bachelor of Science in Information Technology, Major in Software Engineering

Aklan State University - Kalibo Campus | 2024 - Present | 2nd Year

TECHNICAL SKILLS

Problem Solving and AI: Generative AI-assisted development, prompt-based prototyping, problem decomposition, debugging, code review, technical documentation

Programming: Python, Java, JavaScript, HTML5, CSS3, FastAPI, REST APIs, Flutter, Dart

Databases and Tools: PostgreSQL, SQL, Git, GitHub, Docker, VS Code, IntelliJ IDEA

EXPERIENCE

Student Assistant | Aklan State University

- Supported faculty and office staff with administrative, technical, and records-management tasks in a fast-paced academic environment.
- Improved day-to-day workflows by organizing digital files, cleaning records, and maintaining accurate document and spreadsheet data.
- Resolved routine computer issues, set up equipment, and provided user support to minimize downtime.

PROJECT EXPERIENCE

Lead Developer - AqOne | AI Fest 2026 finalist (2nd of 47 teams)

- Led architecture and backend development of an offline-capable maritime SOS and search-and-rescue platform for municipal fishers in New Washington, Aklan, where trips can move beyond cellular coverage.
- Used generative AI as a development partner for ideation, implementation, debugging, and documentation while reviewing outputs, testing behavior, and making final engineering decisions.
- Built FastAPI and PostgreSQL services for auditable incident data, last-known position tracking, uncertainty-aware search areas, confidence indicators, data age, and coverage gaps.

Backend Developer - Project Tabang | UPV KomsaiHack 2026, Risk Ready (Top 10 team)

- Directed development of a flood-reporting and disaster-response platform for Aklan during a university hackathon, coordinating task execution and technical decisions under time constraints.
- Built location-based emergency reporting features and helped present the solution to judges and mentors.

ACHIEVEMENTS, TRAINING AND LANGUAGES

Achievements: AI Fest 2026 finalist (2nd of 47 teams); UPV KomsaiHack 2026 Risk Ready Top 10 team; 1st Place, ICT Week Programming Competition; founder of ASU DevGuild; led collaborative software projects and Git workflows.

Training: DICT Python Programming Essentials (40 hours); DataCamp Introduction to Python, Java, and OpenAI API; AWS Cloud Computing Fundamentals; cybersecurity and data privacy training.

Languages: English (Professional Working Proficiency), Filipino (Native).
